INTERACTIVE WEBSITE / PROJECT OVERVIEW

Shipping Cost Calculator

A clear shipping estimate, from package details to final cost.

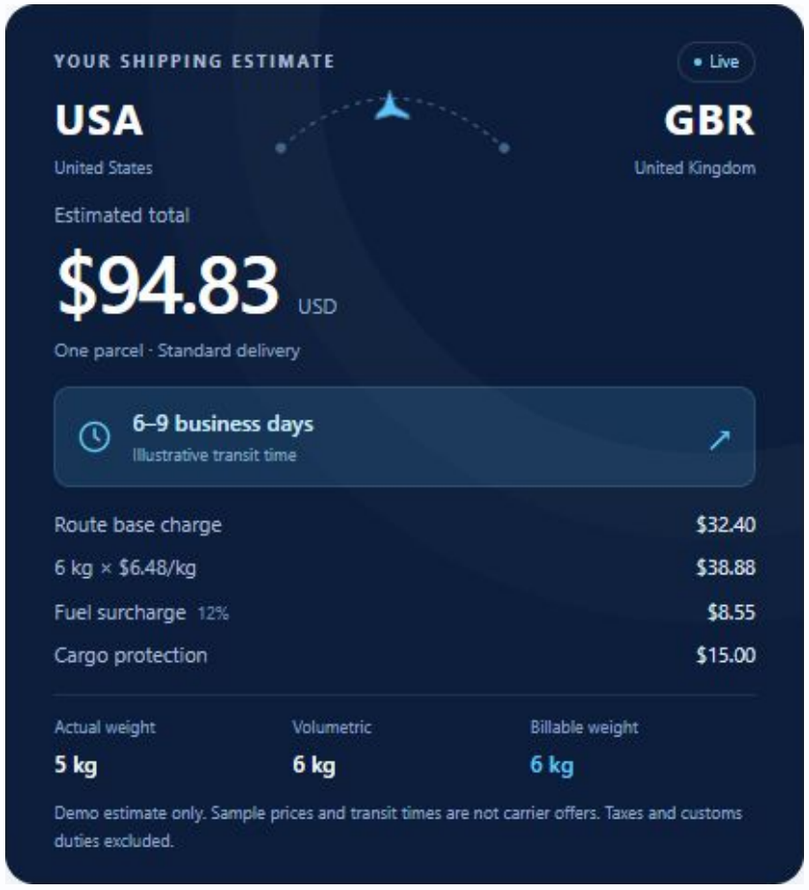

FUNCTIONAL DEMONSTRATION / SAMPLE ESTIMATE

How the shipping estimate works

United States to United Kingdom
5 kg actual weight / 40 x 30 x 25 cm / Standard delivery

Route base charge	$32.40
6 kg billable weight x $6.48/kg	$38.88
Fuel surcharge / 12%	$8.55
Protection / $1,500 declared value	$15.00
Estimated total	**$94.83**

Dimensional weight in action

Change the length from 40 to 60 cm. Volumetric weight rises from 6 to 9 kg, so the Standard estimate changes to $116.61.

Delivery and protection options

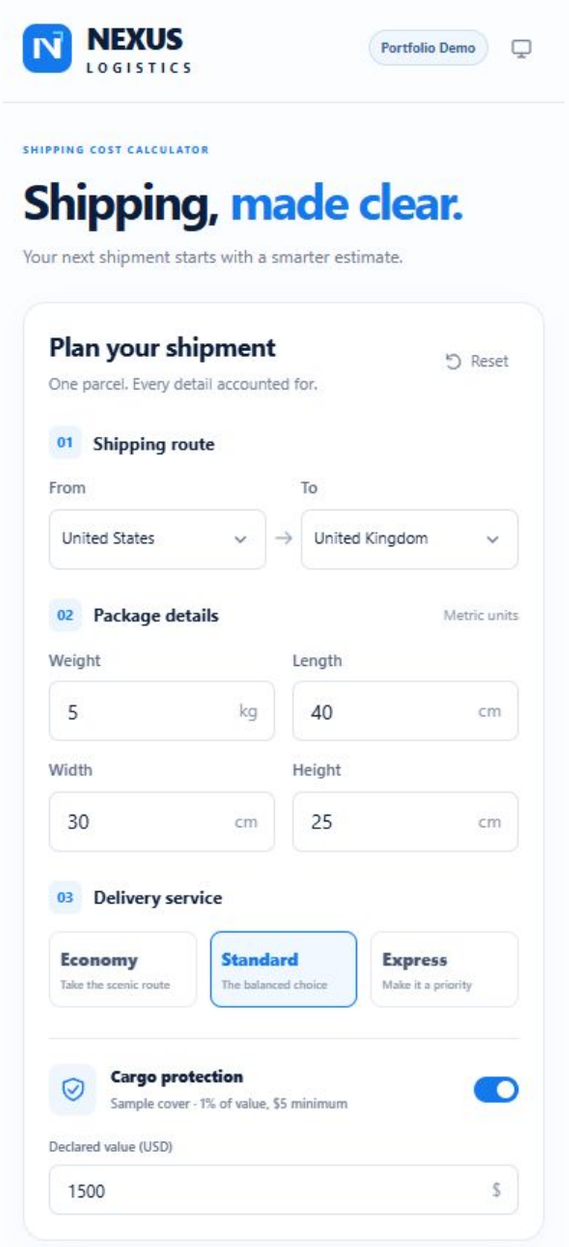

With the larger parcel, Express produces a $158.00 estimate and 2-4 sample business days. Turning protection off changes the total to $143.00.

Demo formula: L x W x H / 5,000. Bill the greater of actual and volumetric weight, rounded up to 0.5 kg. Taxes and customs duties are excluded.

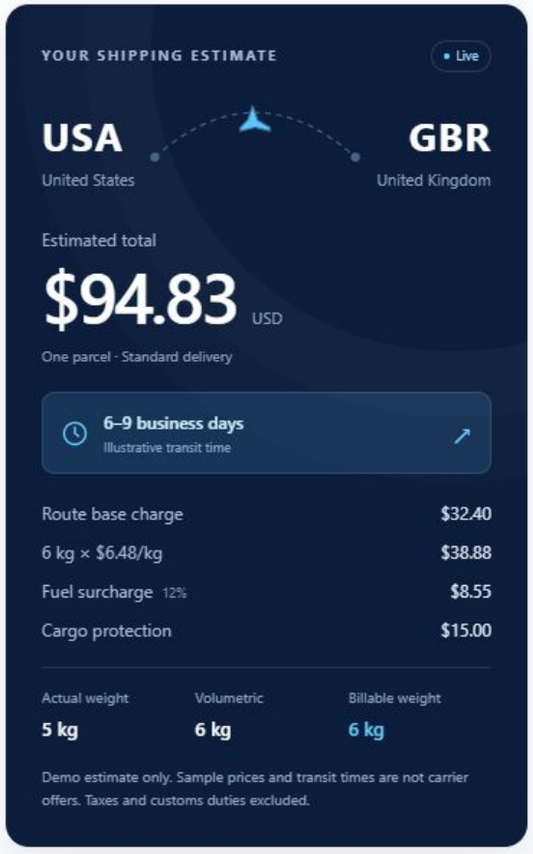

RESPONSIVE DESIGN / IMPLEMENTED FEATURES

Designed for desktop and mobile

PROJECT SETUP

COST BREAKDOWN

Eight sample countries

Route selection and Economy, Standard or Express delivery update the estimate immediately.

Automatic weight comparison

Actual, volumetric and billable weight appear together, with an itemized price breakdown.

Useful input validation

Invalid values show a field message and suppress the price. Reset restores the working example.

Independent frontend project

HTML5, CSS3 and JavaScript. Local SVG assets, keyboard controls and reduced-motion support. No backend or paid API.
